

HOW TO KNOW THE THINGS OF GOD.

DISCOURSE BY ELDER JOHN TAYLOR, DELIVERED IN THE NEW TABERNACLE, SALT LAKE CITY, MAY 6, 1870.

REPORTED BY DAVID W. EVANS.

The Scriptures inform us "that no man knows the things of God, but by the Spirit of God;" and then no man can speak the things of God unless aided by the Spirit of the Lord; and no people can comprehend the things spoken unless inspired and guided by the same Spirit. We need this Spirit continually and so do all mankind, to guide us, to enable us to comprehend the laws of life, to regulate and concentrate our thoughts, to elevate and ennoble our feelings, to give force and vitality to our actions, and to place us in a position before God, before men, and before the holy angels, that will be right, acceptable and proper to all true intelligence, to the angelic host, and to our heavenly Father. It matters very little what we are engaged in, it is impossible for us to do right without the guidance of the Almighty; but aided and directed by the Spirit of the Lord, we can act in consonance with the dignity of our high position as immortal beings possessing the holy Priesthood, and participating in the new and everlasting covenant; by the aid of that unerring Spirit we can fulfil the measure of our creation and prepare ourselves for an inheritance in the celestial kingdom of our God.

We are told "that the world by wisdom knows not God;" yet they do comprehend a great many things, and because of the spread of general

intelligence and the great progress of science, literature and the arts, they believe they can find out God. Like the framers of Babel's Tower, they seek to penetrate the heavens on natural principles. Like them they are mistaken, as all men have been who have sought to solve the problem of life through the influence of human wisdom. No man ever did understand God on this principle; neither can they by mortal agency alone understand the principles of life and salvation. No man in the present generation comprehends them on this principle; neither will human wisdom enable any man who ever will live to understand them. It is true that mankind, within a short time, have made great advances in the arts and sciences. During the last half century scientific research has made many wonderful developments; and many things which, before that time, were unknown to the human family, are now quite familiar. There was very little known of the application of the power of steam half a century ago. I remember, very well, the first steamboat and locomotive that were propelled by steam, and riding on the first railway. Before that, locomotion had to depend upon the winds and tides and horse power and a few other agencies. These are now supplanted by what all will acknowledge as a very superior agent—namely, the power of steam.
