We talk to the Latter-day Saints a great deal, and we wish them to become a thinking people, a people that will reflect and begin to systematize their lives, and know the object of their existence here. This life is as precious and valuable as any life ever possessed, or that ever will be possessed by any intelligent being, and hence the necessity and propriety of understanding its object and using it to the best advantage in every respect, and of understanding principle in all things.

It was observed here by Brother Taylor, this morning, when speaking of the arts and sciences, they are from eternity to eternity. They can neither be increased nor diminished; and the Lord has had to teach the people all that they know, no matter whether it be the wicked who acknowledge Him not, or the righteous, both are alike in that respect—they receive their knowledge from the same source. The construction of the electric telegraph and the method of using it, enabling the people to send messages from one end of the earth to the other, is just as much a revelation from God as any ever given. The same is true with regard to making machinery, whether it be a steamboat, a carding machine, a sailing vessel, a rowing vessel, a plow, harrow, rake, sewing machine, threshing machine, or anything else, it makes no difference—these things have existed from all eternity and will continue to all eternity, and the Lord has revealed them to His children.

In the infancy of creation the human family commenced down at the bottom of the ladder, and had to make their way upward. How small and frail that commencement looks now; why it is considered almost beneath the notice of the wise of this day to talk of the intelligence of our First Parents. When they waked from their sleep and found themselves in a state of nudity, we are told that they hid themselves, because they were ashamed and mortified and did not wish to expose themselves when the Lord came along. And he picked some fig leaves—what a simple idea! He picked some fig leaves and sewed them together and made aprons of them. I do not know whether he used scissors or His penknife for the cutting out of the garments, or what kind of a needle and thread He used, but he made aprons for the whole human family—Adam and Eve! What a simple idea! It is beneath the notice of the mechanic or artist, or the science of the world now-a-days. Yet simple as it seems now, the Lord had to reveal to our first parents the modus operandi of the manufacture of an apron of fig leaves. And when they wanted a little copper made up, after having found the ore, the Lord had to come along and show them how to do it; and how to manufacture the iron. How simple this is! It is beneath the notice of the intelligence and science that are in the world now; the scientific men of the present time say those were the days of ignorance. Yes, that was in the period of the childhood of the human family; in the infancy of the world. But what does it manifest unto us? Why that there is a Being superior to man, and though we may not know the place where He resides, He has come along occasionally and shown His creatures how to make and work up brass, iron, copper, and in fact has revealed to them everything they know at various stages of their development and progress.

The people of this day think they know more than all who have preceded them—that this is the wisest generation that ever did live on the earth. Perhaps it is in worldly things, and in some of the arts and
