Saints, we have no revelation concerning its location. But there is a location, where these two glorious personages dwell. It has a location, just as much as our earth has a location in the solar system. But when I speak of our Father and our God being located in a glorious mansion, or celestial world, I do not wish to be understood that he is confined to that location. Do not misapprehend the subject. He is not confined to that particular locality, in the midst of universal space. He has power which we are not in possession of. He has power to waft himself from that particular locality to other dominions, other worlds, other creations; and to do this with an immense velocity. Of course, to accomplish this must occupy time. There are some, however, so foolish in their ideas that they suppose that it does not require time for the Almighty to go from one world to another, or for any celestial messenger to do so. But this is a grand mistake. Time is included in all motion. Time is included between the event of a heavenly being leaving the celestial abode, where he dwells, and going to some other abode at a distance. How great this time may be is not revealed; but I have an idea that it is much swifter than any velocity with which we are familiar; I mean the velocity with which our Father and God can convey himself from the celestial abode where he dwells to some other kingdom. I believe it be much swifter than that of the common light which shines from the heavenly bodies of our system, or from the distant bodies of the stellar system. Now, light travels with immense velocity—185,000 miles in one beat of the pulse, or in about one second of time. We might suppose that that is about as swift as any being would want to be wafted. But suppose that our Father, in the heavenly world where he dwells, should feel disposed to visit one of the vast dominions of his great creation as far distant as the nearest fixed star. If he could go no faster than light is transmitted through space, it would take him three and a half years to perform the journey. And to go to one that was situated some ten or fifteen times further off, it would take, of course, ten or fifteen times longer. And to go to some which are as far off from him as the distant creations that are just visible through our most powerful telescopes, it would take him six hundred thousand years to perform the journey, provided his velocity was only equal to that of light. I draw the conclusion, therefore, that God is not confined to the velocity of light, or to any other velocity with which we are acquainted—that he can go with immense velocity, perhaps thousands and hundreds of thousands of times swifter than that of light, if he feels disposed so to do. It is out of the question for us to suppose that God does not travel in going from creation to creation. That he could be momentarily and instantaneously in two creations at the same time is something that I never could comprehend, although it is believed in by some of the religious professors of the present day. They believe that God, in his person, can be in infinite space all at the same moment. That is not our doctrine. It is not my doctrine, at least. He may be, by his power, by his intelligence, by his spirit, in infinite space, working throughout all the vast dominions of space, according to laws he has ordained and instituted.

Having said so much, in regard to the locality of our Heavenly Father, and of the celestial beings who dwell
