

have allowed water to stand in pools. In St. George, however we have not been troubled with it. Washington and Santa Clara have, but it has arisen from defective sanitary measures. Naturally, I think our Southern country is quite as healthy as the general average of places in Utah. And when I speak of the number of men who have worn themselves out in helping to subdue the barrenness of the land, I might have said they have been mostly hale, hearty men, who went there in their prime, that wore themselves out with constant work in making homes for themselves and families. They have fallen a prey to exposure and labor both summer and winter, and to poor fare. But after saying this, I am happy to say also, that I think we have passed the crisis in this respect. We have learned wisdom by the things we have suffered: the comforts of life are being increased around us, and we are making up our minds now not to kill ourselves trying to live as fast as we have done in times past.

Now, I have said on different occasions, which it is as well for the youth of our large towns, our railroad towns and cities, where emigrants are dropped by the shipload, and where there is a redundancy of labor and surplus workmen, who are seeking for something to do and cannot find it, and are idling away their time and are waiting for something to turn up, and waiting for some easy chair, some clerkship, some place to make a living without working much—and I may say this class of people are abounding among us, and they receive an unfavorable education, and are contracting habits which are not good; I have said, and do say, that it is better for such to enter into

swarms and form material for new colonies, to help to establish new places, and make new roads to the timber, get out farms, build mills, and subdue the elements, as their fathers did when they first settled this country. But in saying this to the surplus population of our older towns and railroad centers, we do not wish to apply it to these regions, where you have an abundance of room, needing, in fact, a much heavier population. I am persuaded that the people of this valley will be healthier, happier, and will enjoy more facilities and comforts when their population is treble to what it is today. Three times the population you now have can handle the facilities which you do much easier than the present population can handle them, and to better advantage and to better profit to all. And you will have better roads, and better farms, and better houses, and better mills, and better schools, your cities will be much better built up and improved, and your property more valuable, and everything will conduce to your comfort and growth, than under existing circumstances.

I was favorably struck with Garden City as I passed through it; I was favorably impressed with St. Charles as I passed through it. These are beautiful locations. I was particularly pleased with one thing I saw in Garden City, which was the long canal from Swan Creek. In this cold climate, where the seasons are short, it is important in irrigating, that the water should run slow and as long as possible before it is put on to the land, in order that it might get warmed, because it has a much more salutary effect on young crops than where it is cold and chilly direct from the canyon; and I am persuaded that a good deal of your small
